Tutorial: Part 1

Setup Account for iOS Development

Created by: Steven King

Assistant Professor of Interactive Media

UNC School of Journalism and Mass Communication

TUTORIAL PLAN

Objective

Learn how to setup Apple developer account for iOS development

Goals

Get through this a painless and possible!

Time

Less than 1 hour if all goes well

Outline

1. Background
2. Sign-up for iOS Apple Developer Account
3. Generate Developer Certificate
4. Add Certificate to Keychain
5. Create P12 File

1. BACKGROUND

Why is this so hard?

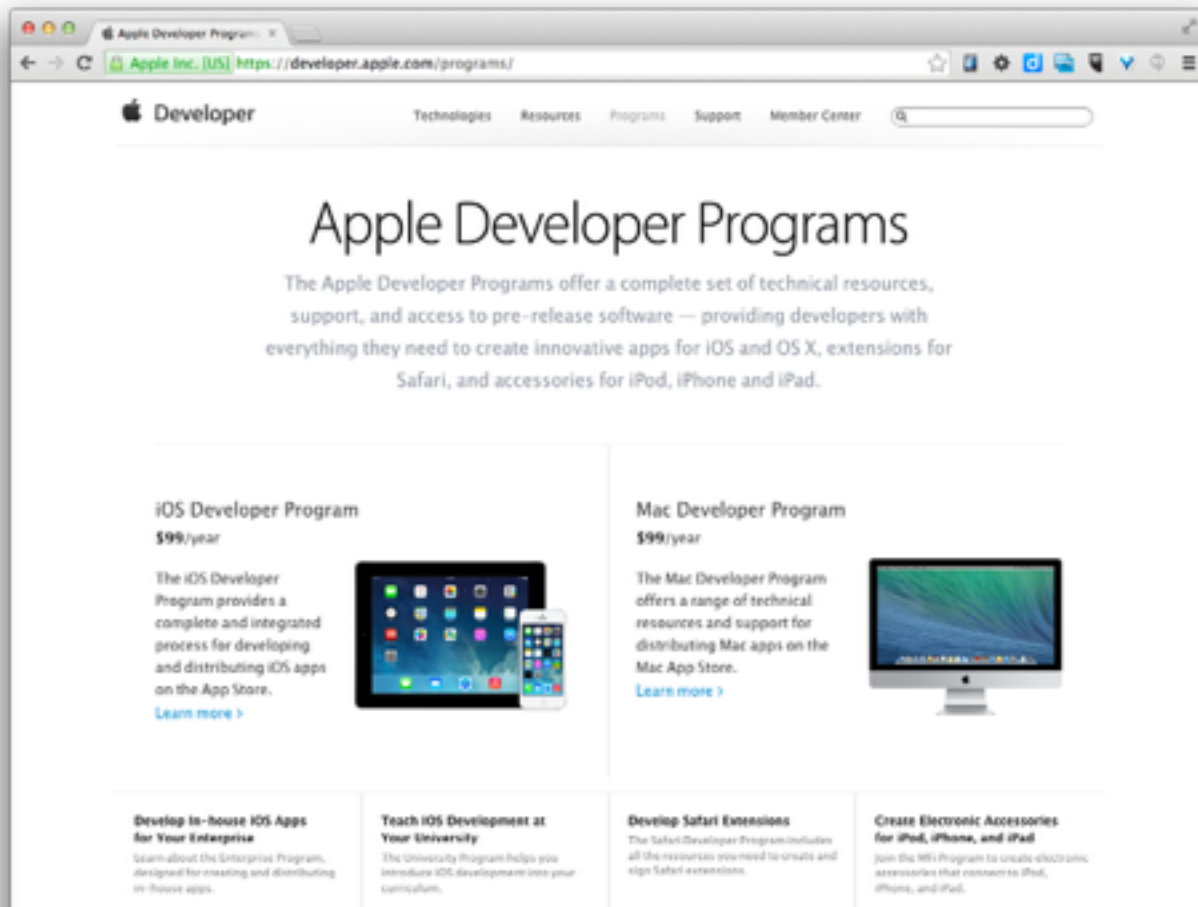

This is why...

2. SIGN-UP IOS APPLE DEVELOPER ACCOUNT

\$99 iOS Account

Apple requires a \$99 fee to set up an iOS developer account. This enables you to create and build applications and eventually publish to App Store.

Go to: <https://developer.apple.com/>

Click on Learn More under iOS (not Mac Developer)

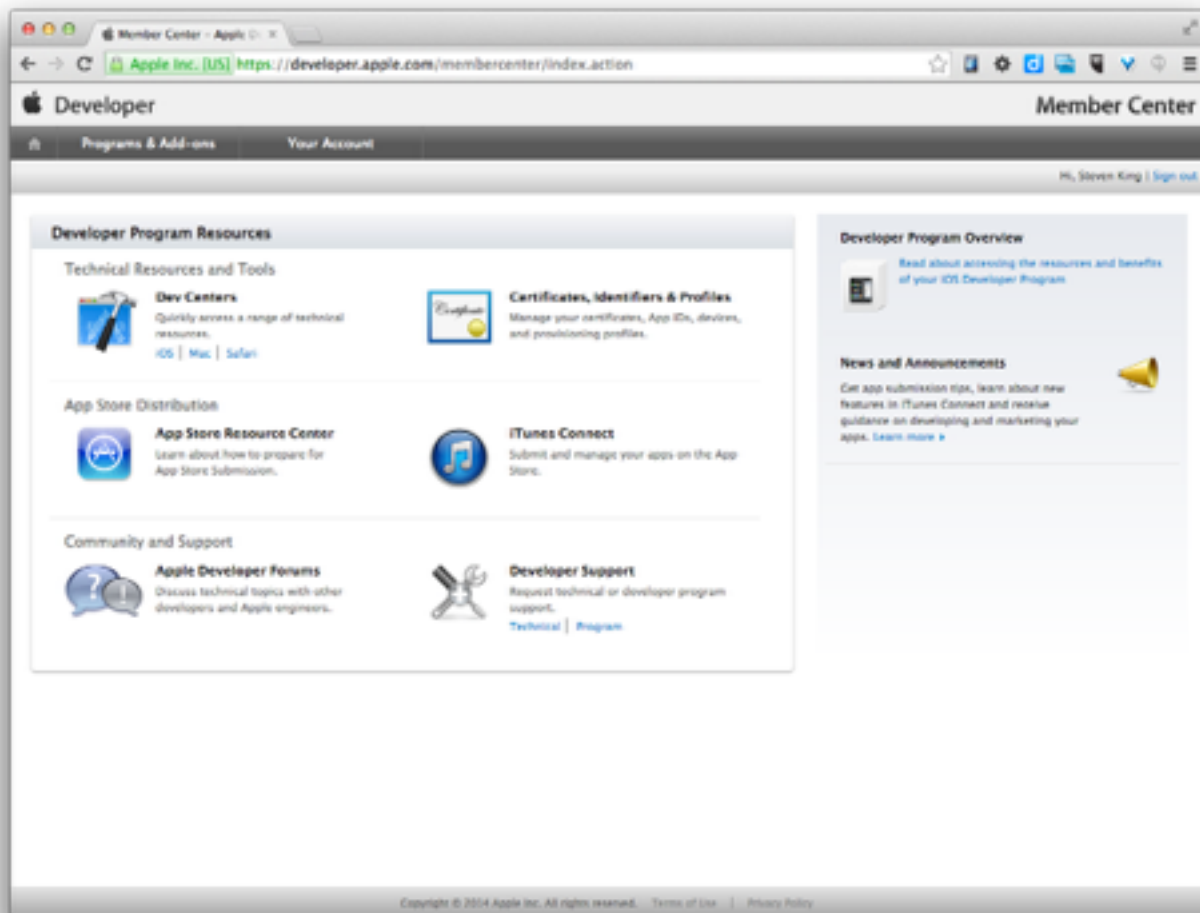

Click Enroll Now and use your existing Apple ID you use with iTunes or iPhone

Follow Steps and make payment

3. GENERATE DEVELOPER CERTIFICATE

Go to: <https://developer.apple.com/membercenter/index.action>

Login with your Apple ID on the top right

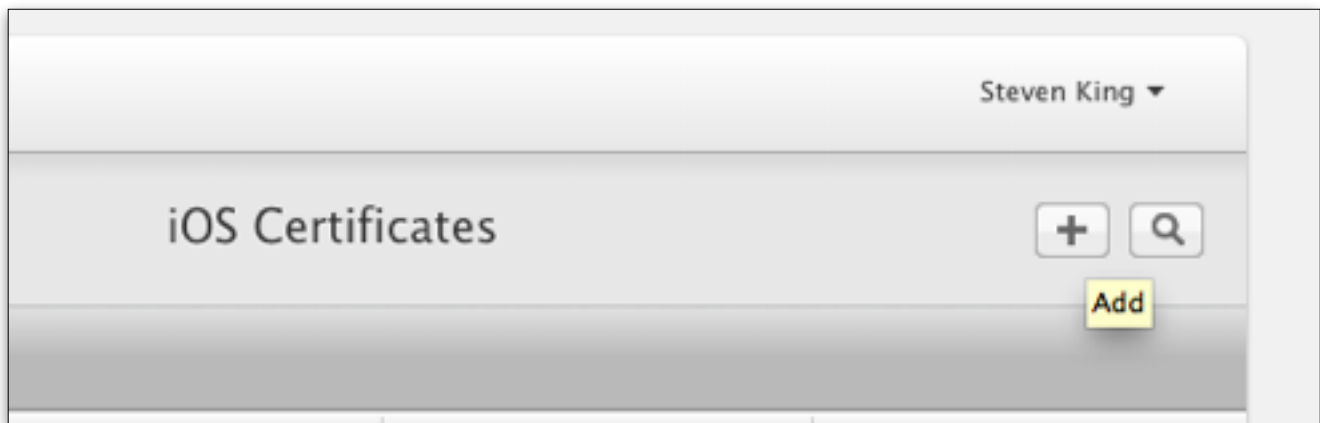

NOTE: if you are using Windows, please go this link to learn how to do this on a Windows machine. It is more difficult! <http://www.iandevlin.com/blog/2012/11/phonegap>

Click the Certificates, Identifiers and Profiles section

Click Certificates

Create a new certificate by clicking the Plus icon on the top right corner

Select iOS App Development choice and click continue

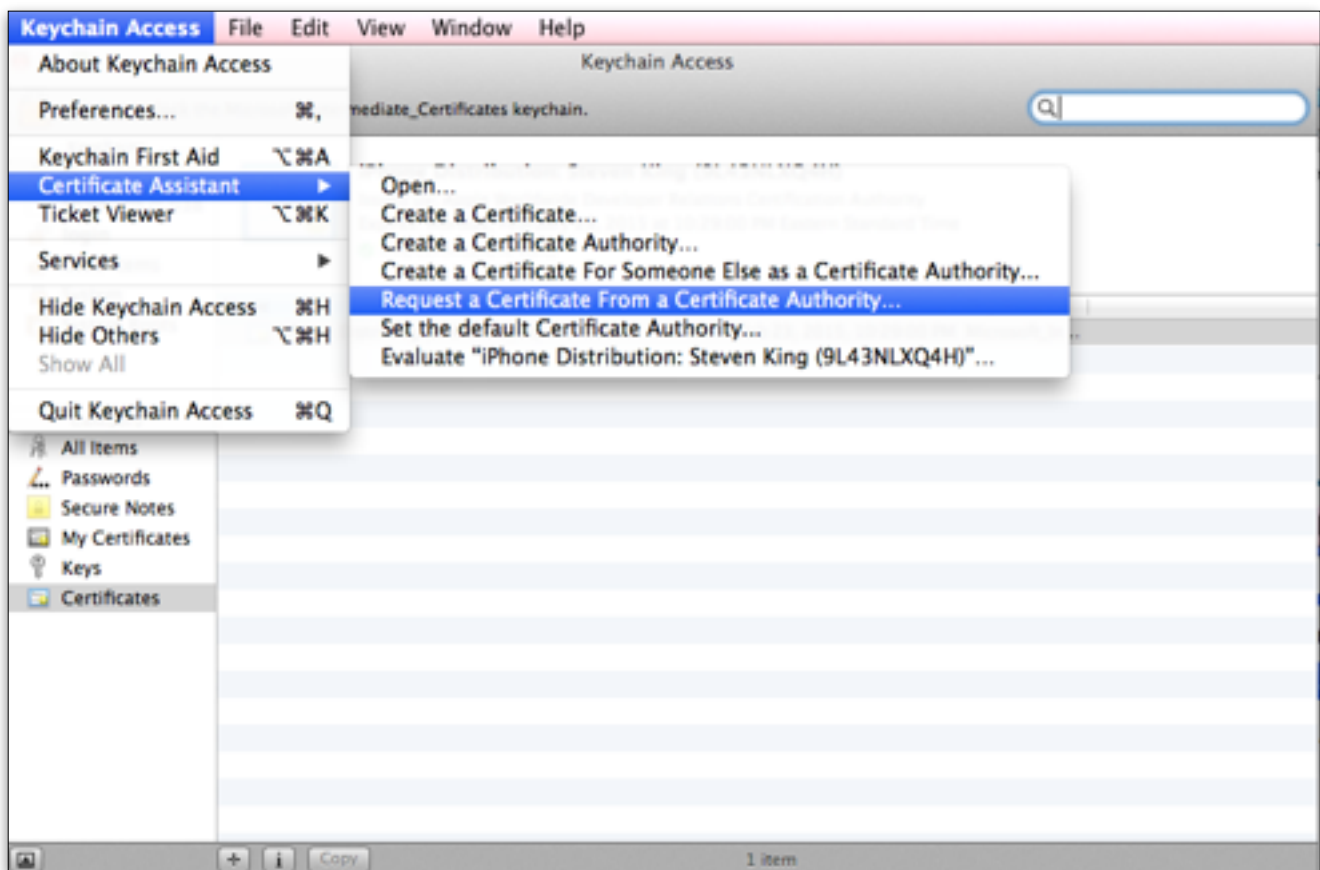

When you are ready to deploy to the App store you will return here and generate a different certificate.

Open the KeyChain Access Application to generate a certificate.

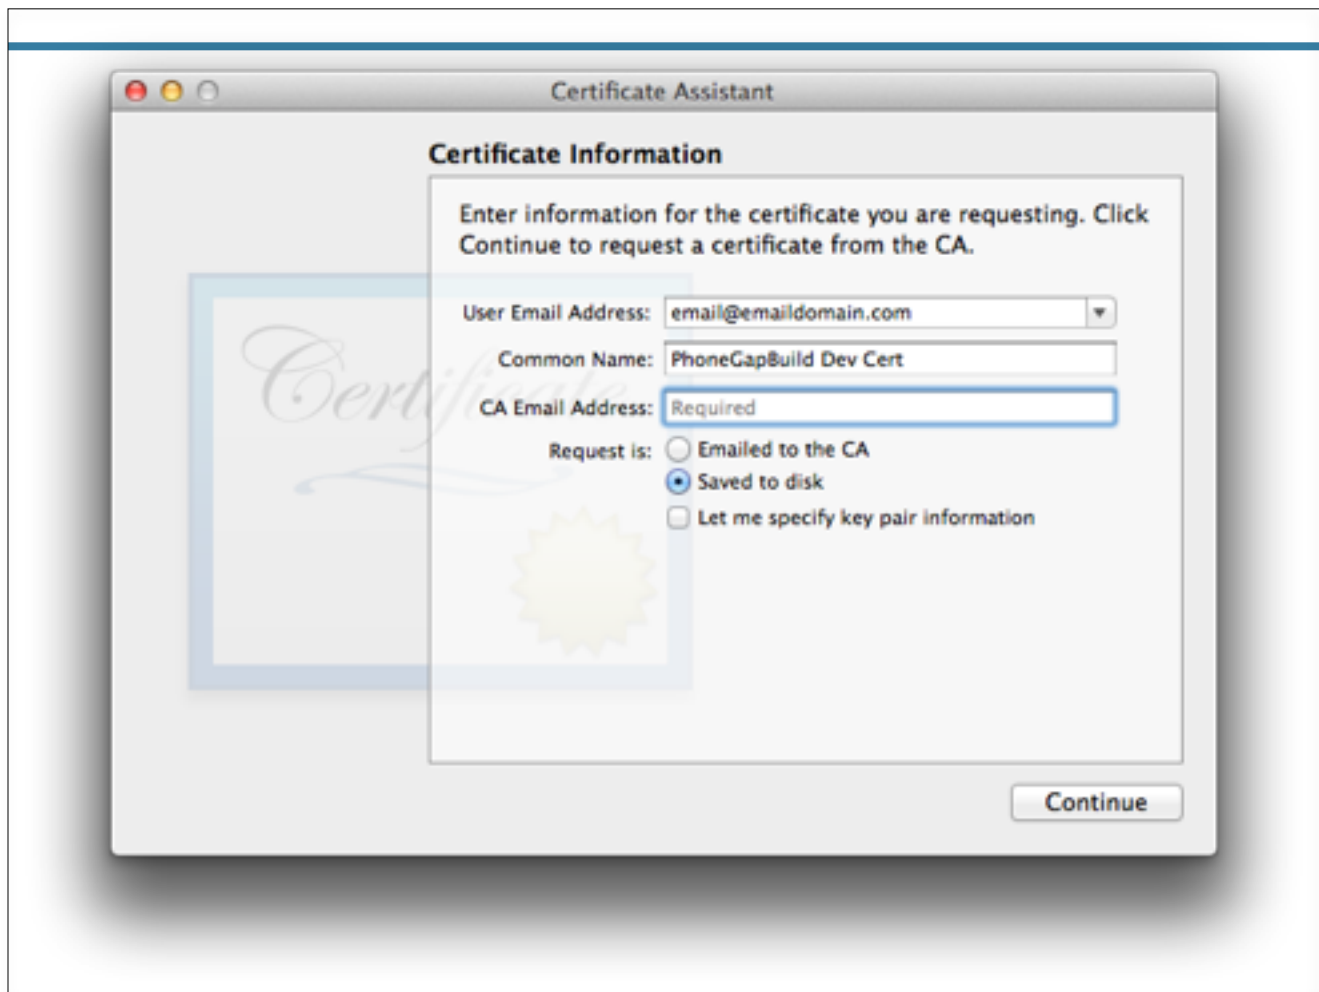

It is in the utilities folder or use Spotlight on the top right and search for it.

Select Keychain Access Menu —> Certificate Assistant —> Request a Certificate from a Certificate Authority.

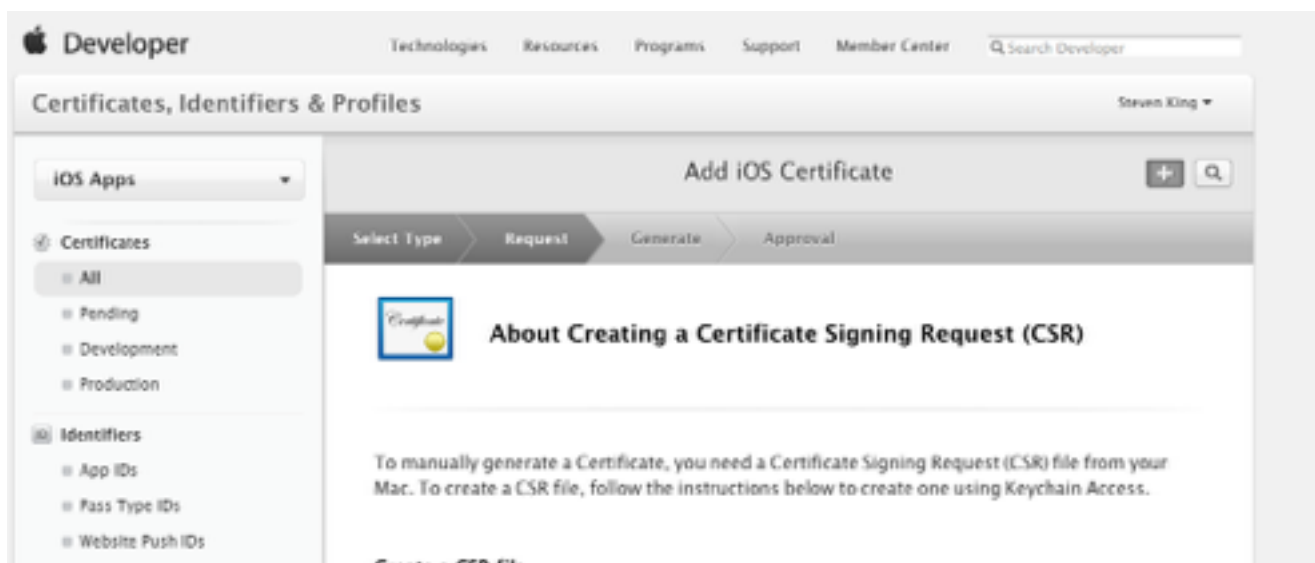

Fill out the form with your email address and a name to let you know what this certificate is used for. Select Save to Disk and click Continue

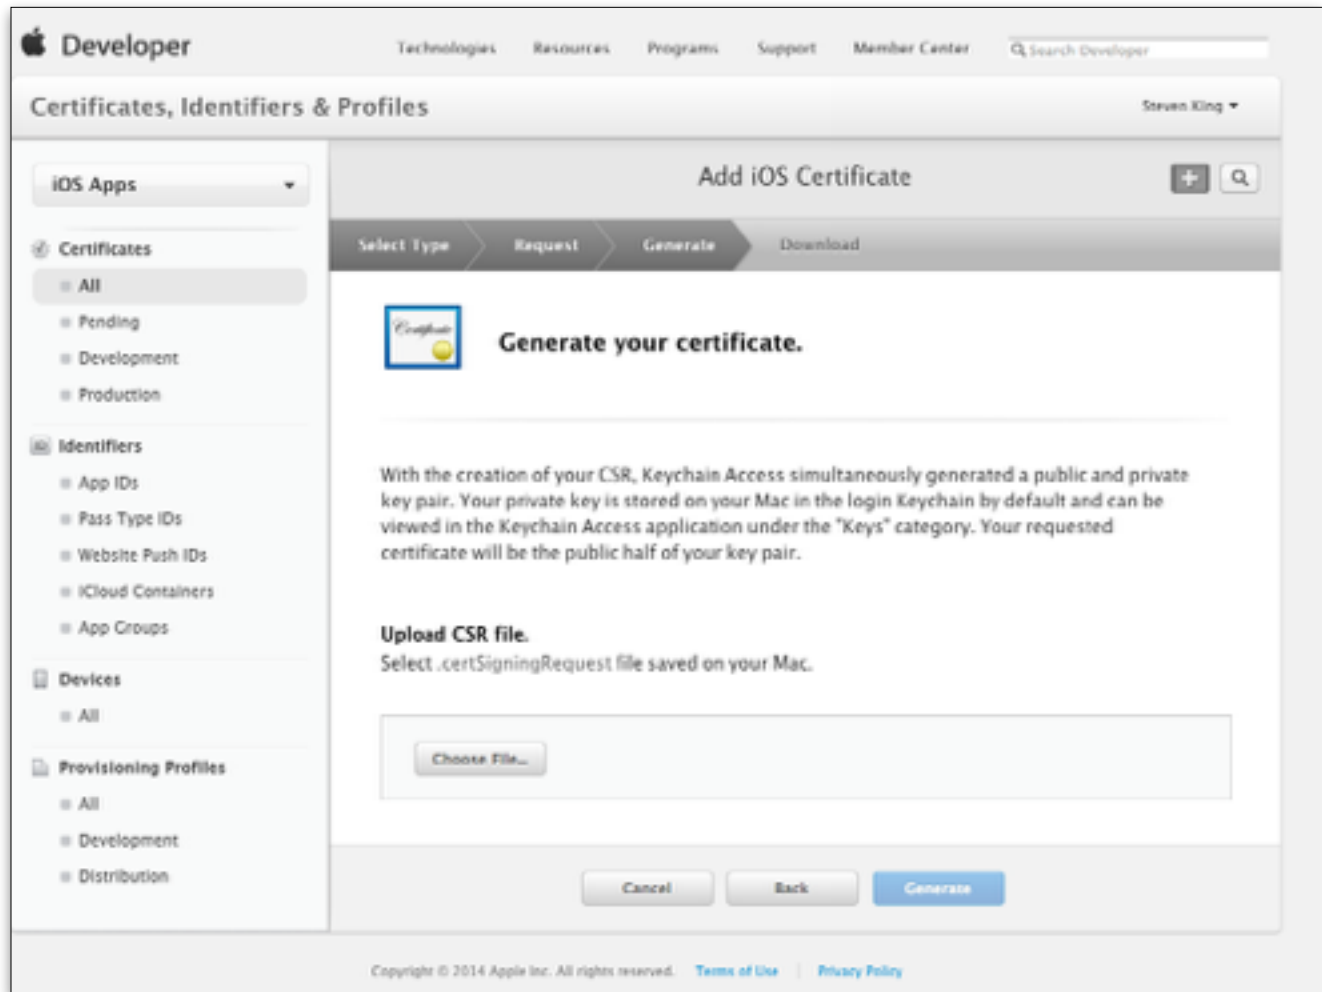

Save the file to the Desktop of your computer and click done.

Note: It is a good idea to make a copy of this file and store it somewhere other than your machine.

Switch back to your browser and go to the CSR page you already have open and click Continue

Upload the .cert file you just created to the Apple development portal

Choose file and select the file on your desktop you just created.

Once it is uploaded, click the Generate button

Upload CSR file.

Select .certSigningRequest file saved on your Mac.

Choose File...

CertificateSigningRequest.certSigningRequest

Cancel

Back

Generate

This will take a moment. When complete, click Download, Save to your Desktop

Note: It is a good idea to make a copy of this file and store it somewhere other than your machine.

Your certificate is ready.

Download, Install and Backup

Download your certificate to your Mac, then double click the .cer file to install in Keychain Access. Make sure to save a backup copy of your private and public keys somewhere secure.

Documentation

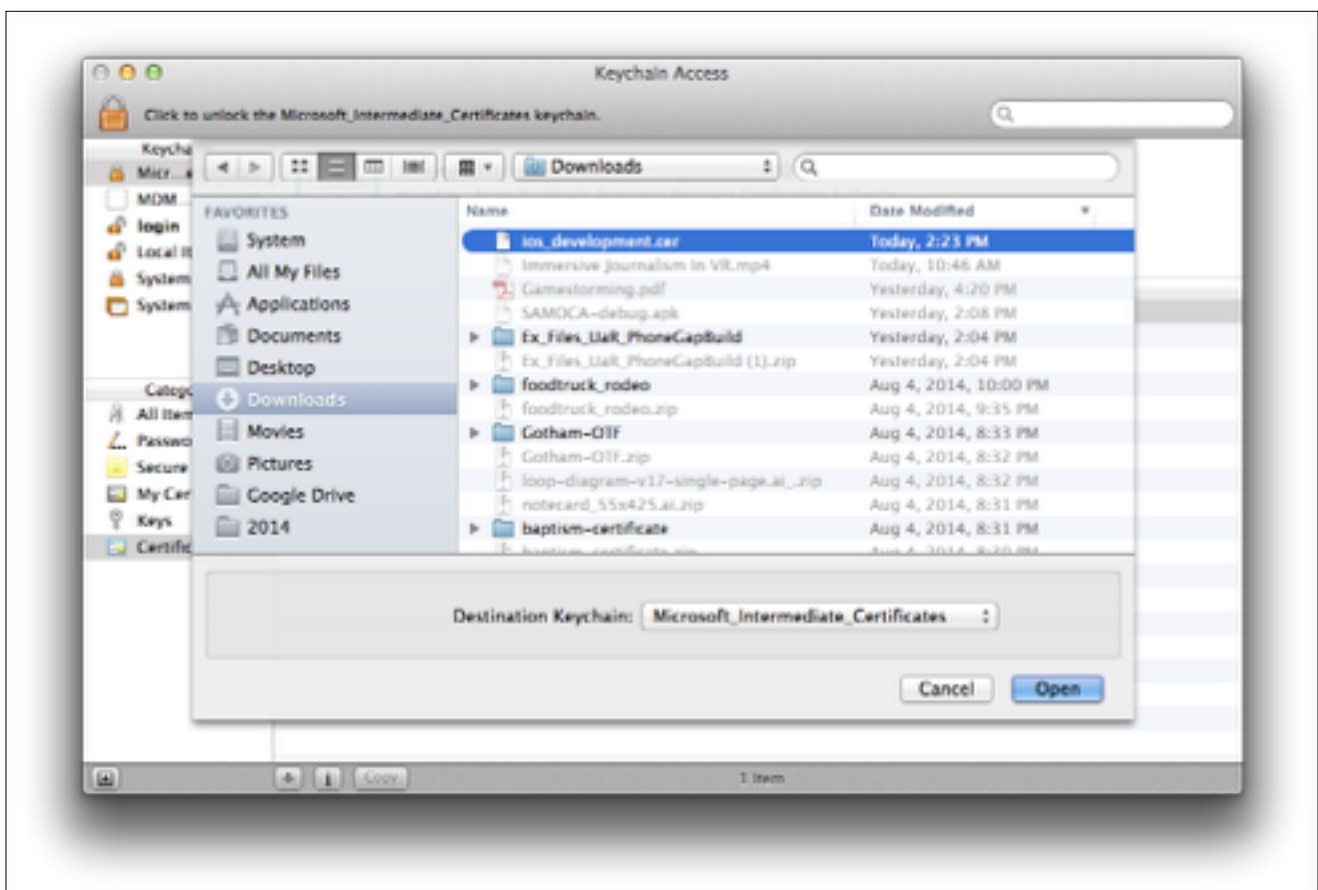

For more information on using and managing your certificates read:

[App Distribution Guide](#)

4. ADD CERTIFICATE TO KEYCHAIN

Switch back to Keychain Access and got to File —> Import Items.

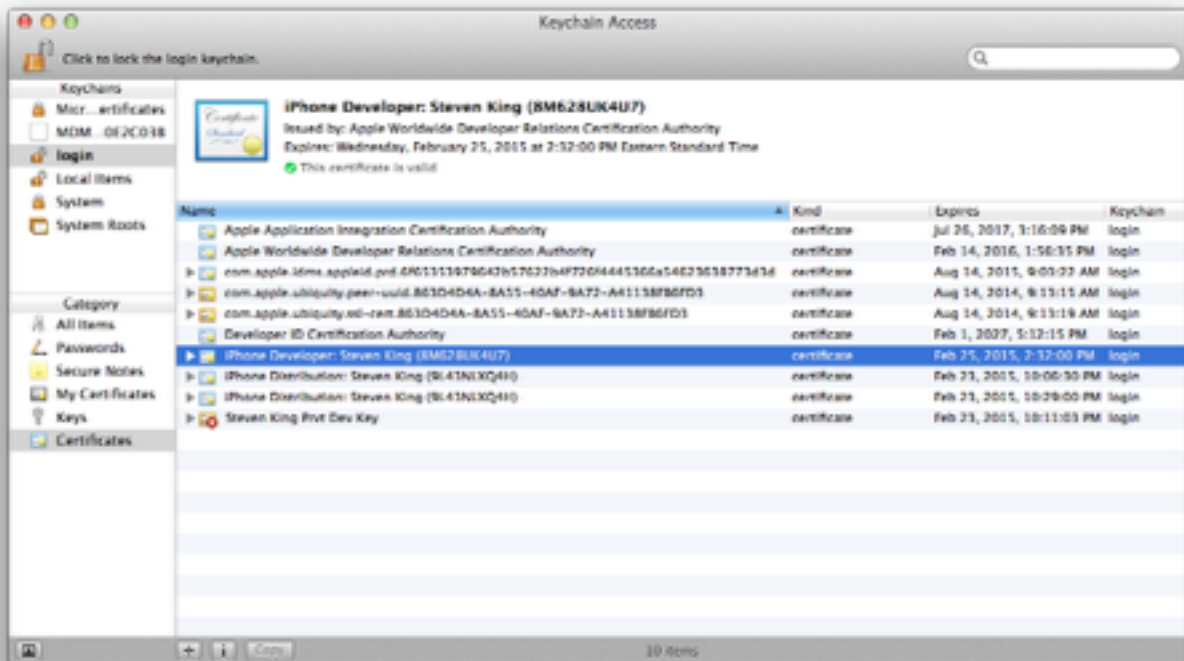

Select the `ios_development.cert` file you just downloaded. It might have saved to your Downloads folder.

Note: It is a good idea to make a copy of this file and store it somewhere other than your machine.

On the left side, make sure login is selected and select Certificates to display only the cert files.

Select the one you just created. It should read iPhone Developer and your name.

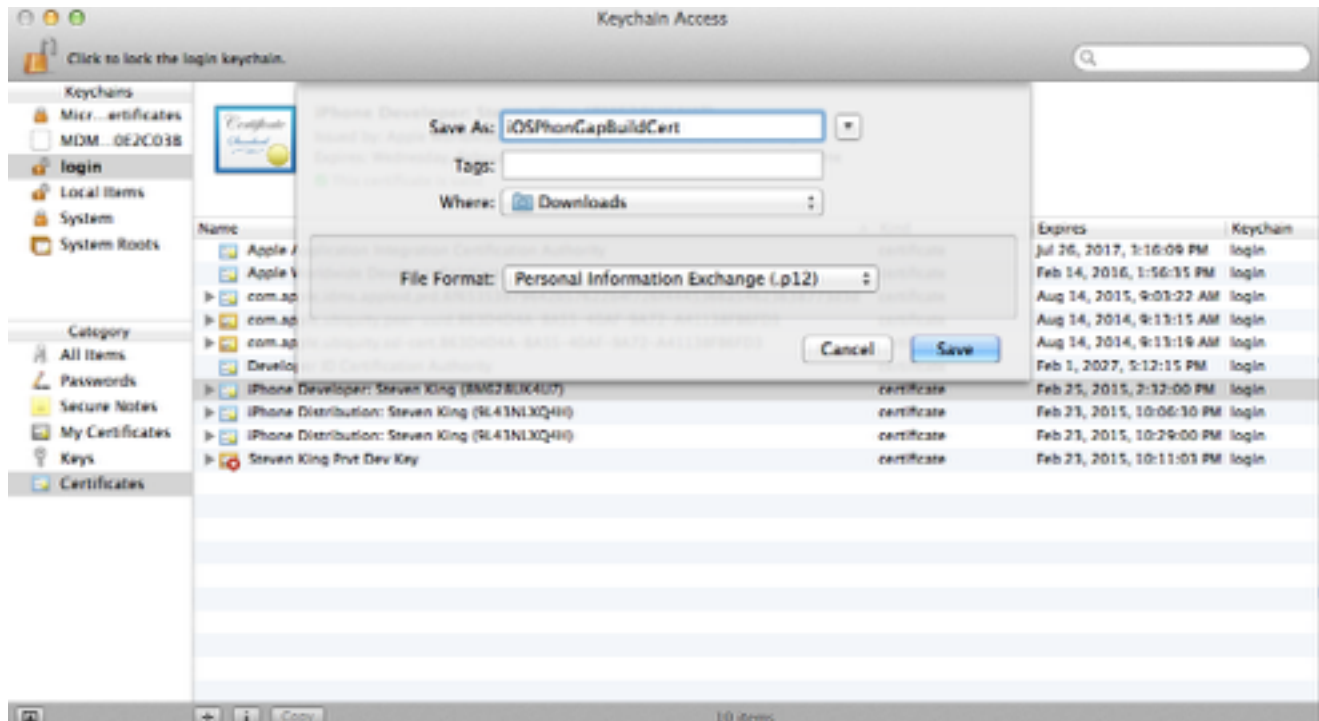

Note: I have multiple on my system but you may only have one. If you are trying to find the one you just created, it is the one that expires one year from the time you just created it.

5. CREATE P12 FILE

With it selected, go to File → Export Items

**Save the file to the Desktop with a name that is recognizable like
iOSPhoneGapBuildCert**

Note: Make sure the file format option is set to Personal Information Exchange p12.

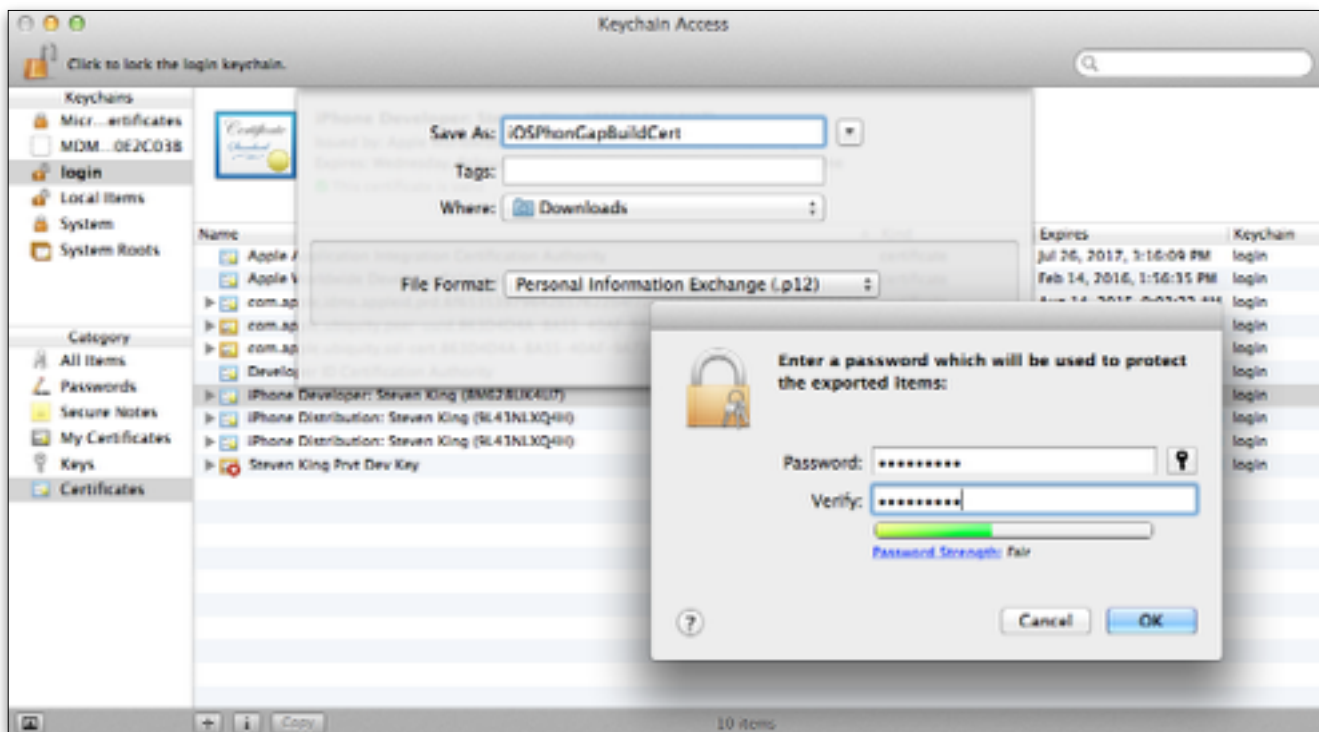

STOP AND READ: VERY IMPORTANT STUFF HERE!

You will be prompted for a new password. It is **VITAL you remember this password** as there is no way to recover it and you would have to start the process over again!

After that you will be asked for your Keychain Password. This is the Keychain Password, typically your system/login password you always use.

Now, create a password and then enter your system keychain password

Congratulations! You have successfully set up the certificates and keychain for iOS development.

The next step is to create a unique app ID found the next tutorial.

6. CREATE APP ID

Each application needs its own, unique ID. Every new project or app you create will require this step.

Click the App ID heading on the right side menu.

Click the plus icon in the upper right to create a new App ID.
